

Environmental Policy

Policy Commitment

Yesiang Enterprise Co., Ltd. is committed to environmental sustainability as a core corporate value, recognizing the protection of ecosystems and the mitigation of climate change as both a responsibility and a source of competitiveness. We not only comply with environmental laws and regulations but also proactively promote green transformation across our own operations, suppliers, and partners, building a sustainable value chain together.

Action Principles

- **Compliance with Laws and Standards**
We strictly comply with environmental regulations, international standards, and customer requirements, and ensure that our suppliers and partners also meet these standards.
- **Reducing Environmental Impact**
We implement circular economy practices and green manufacturing to actively reduce pollutants, waste, and greenhouse gas emissions, improve resource and energy efficiency, and minimize the environmental footprint throughout the product life cycle.
- **Accountability and Governance**
We establish a clear organizational structure and accountability framework for environmental policy implementation, designating dedicated units or personnel to monitor, promote, and review performance.
- **Education, Training, and Culture**
We provide employees with regular environmental education and training to enhance awareness and empower action, embedding sustainability into our daily operations.
- **Target Setting and Performance Management**
We set measurable environmental objectives, regularly monitor and disclose performance, and ensure continuous improvement and transparency.
- **External Communication and Stakeholder Engagement**
We actively engage with government agencies, local communities, NGOs, customers, and other stakeholders throughout the policy development and implementation process to ensure the policy meets societal expectations and creates shared value.

Sustainability Vision

Through innovation and collaboration, Yesiang aims to advance environmental sustainability and green value creation, achieving the long-term vision of reducing environmental impact, improving resource efficiency, and moving toward sustainable operations.
